Project Summary

The topic of my site is tourism in Japan, particularly Tokyo and Kyoto. The purpose is to inform my friend, Emmanuel, of places to visit and things to eat while he is there during the summer. Although this website is intended for one person only, I'm sure other people can benefit from this website as well.

Extra plug-ins used:

1. Rellax (https://dixonandmoe.com/rellax)

   I used this to create a parallax effect for certain images as well as some graphics to make things look nicer. I had to use window.onload to make sure my images loaded before this plug-in ran so that the image positions were correct.

2. ScrollOut (https://scroll-out.github.io/guide.html)

   I used this to make elements in the webpage appear smoothly when scrolling because I think it makes things look nicer.
